Summary

Full stack engineer with 5 years of experience building production React and Next.js applications for US clients including John Deere, Bass Pro Shops/Cabela's and SailPlan, and contributed to a React Native app (Gather) built with Expo, Firebase and SQLite. Also redesigned the core UI of InFlow, a payments platform, in Spring Boot, Pebble and HTMX. Strong in TypeScript, state management (Redux Toolkit, Zustand, Recoil) and GraphQL/REST integration, with Node.js, Express, MongoDB and SQL for backend work.

Experience

Full Stack Developer, Codify Pvt-Ltd – Rawalpindi, PK Sept 2022 - Present

- Worked as an outsourced developer for US organizations (John Deere, SailPlan, Bass Pro Shops/Cabela's, InFlow), delivering production features within each client's Agile/Scrum team.
- Contributed to Bass Pro Shops/Cabela's e-commerce platform by developing the product display page (PDP), cart and checkout in Next.js, delivering a product customization feature in collaboration with the Threekit team, and shipping additional features and bug fixes.
- Developed John Deere's React front end, fixing bugs and moving several functions into AWS Lambda to decouple that logic from the client.
- Built SailPlan's reports page in React, with dynamic charts for combined and individual vessels and engines and CSV and PDF export, using RTK Query for data fetching.
- Redesigned InFlow's core product UI and design-system components (transactions, approvals, policies, sellers, account flows) using Spring Boot, Pebble, Sass and HTMX, creating a consistent, responsive experience across browsers.
- Built the Journal feature for Gather, a React Native foraging app (Expo, Firebase, SQLite), letting users log finds with photos, location and notes, and refined the taxa and lookalike pages with animations and bug fixes.
- Managed application state with Redux Toolkit, Zustand and Recoil, and integrated GraphQL APIs with Apollo Client for efficient data fetching.
- Migrated marketing content pages from Dojo to React through CMC, moving legacy pages onto the current stack.
- Built REST APIs with Node.js, Express and MongoDB, and maintained quality through Jest tests and code reviews.

Junior Front-end Developer, BCDApps – Rawalpindi, PK Apr 2021 - Sept 2022

- Built component-based web applications in React, Next.js and Svelte, delivering responsive interfaces that worked consistently across browsers.
- Created reusable UI components with Tailwind CSS, Sass, Ant Design and Material UI, keeping styling consistent across pages.
- Managed application state with Redux, keeping data flow predictable across larger applications.
- Integrated GraphQL APIs through Apollo Client and REST APIs, with async handling and error management for reliable data loading.
- Worked with designers and back-end developers to turn UI/UX designs into production interfaces that met business requirements.

Projects

InFlow

- A payments platform for agentic commerce that lets services discover offerings, onboard and authenticate AI agents, and settle blockchain payments across wallets, policies, and transaction workflows.
- Built and shipped documentation sites for the Agent Enrollment Protocol (aep.foundation) and Offering Discovery Protocol (offeringprotocol.org), plus CLI (inflowcli.ai) API reference and B2AI directory (directory.inflowpay.ai) pages.

- **Stack:** Java, Spring Boot, Pebble, Sass, Bootstrap, HTMX, JavaScript and MySQL.

Bass Pro Shops

- A web application for an outdoor recreation retailer, covering hunting, fishing, camping and marine equipment.
- Contributed to the product display, cart and checkout pages in Next.js, using Recoil for shared state and REST APIs for data.
- Delivered a new product customization feature end to end, working with the Threekit team to integrate it into the product experience.
- Shipped a range of other features and bug fixes across the web app.
- **Stack:** Next.js, Rest APIs, and Recoil.

Gather

- A location-aware foraging companion app for wild plants and mushrooms, helping foragers in the US and Canada discover what grows nearby, when it's in season, and how to tell species apart.
- Built the Journal feature end to end, letting users log finds with a photo gallery, location and notes, and browse their entries on a dedicated journal page.
- Resolved UI bugs and implemented animations across the taxa listing and lookalike pages, improving the polish of the app's core species discovery flows.
- **Stack:** React Native, Expo, TypeScript, Zustand, Firebase, SQLite, Mapbox.

SailPlan

- A maritime operations platform that turns vessel and operational data into insights for the shipping industry.
- Built the reports page in React, with dynamic charts for combined fleet data and for individual vessels and engines, and the ability to export any report as CSV or PDF.
- **Stack:** React Js, Rest APIs with RTK Query.

Tequal

- Built Tequal from scratch, a time-tracking and reflection web app where users log their day across four categories (productive, social, relaxing, sleep) and view it on a visual Time Map in day, week and month views, with authentication including Google sign-in and CSV export of time data.
- **Stack:** Next.js, React, TypeScript, Supabase, GSAP, date-fns.

Natours – Backend Tour Booking Application

- Built a scalable backend system using Node.js, Express, and MongoDB, featuring **JWT**-based authentication, role-based access control, password hashing, and input validation for security. Developed CRUD operations for tours, users, and bookings with advanced query filtering, pagination, and data aggregation.
- **Stack:** Node.js, Express, MongoDB (Mongoose), Stripe API, JWT Authentication, MVC Architecture.

Technical Skills

Languages: JavaScript, TypeScript, HTML, CSS, Sass, SQL.

Frameworks & Libraries: React, Next.js, React Native, Expo, Svelte, Node.js, Express, Spring Boot, Pebble, HTMX, Redux Toolkit, Zustand, Recoil, Apollo Client, Bootstrap, Tailwind CSS, Ant Design, Material UI, Mapbox, GSAP

APIs & Data: REST, GraphQL, RTK Query, JWT

Cloud & Tools: AWS Lambda, Git, GitHub, Postman, MongoDB Compass, SQL Workbench, VS Code, Cursor, ChatGPT and Claude.

Databases: MongoDB, SQLite, MySQL, Firebase, Supabase

Practices: Responsive Web Design, Cross-Browser Compatibility, Agile/Scrum, Unit Testing (Jest), Code Reviews

Education

National University Of Modern Languages, BS in Software Engineering — Sept 2017 – May 2021

- CGPA: 3.49/4.0
